NET WEIGHT: 1 pound (454 g)

KEEP OUT OF REACH OF CHILDREN
CAUTION

FIRST AID	
If In Eyes	Hold eye open and rinse slowly and gently with water for 15 – 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.
If On Skin	Wash thoroughly with soap and water.
If Inhaled	Move affected person(s) to fresh air.
If Ingested	Rinse mouth out with water and contact a doctor for treatment advice.
If irritation develops, contact a doctor or poison control center for treatment advice. Have the product label or container with you when calling a doctor or going for treatment.	

PRECAUTIONARY STATEMENTS

With direct contact, causes moderate eye irritation. Avoid contact with eyes and skin. Product is not intended for use on animals. During prolonged exposure to dust, use of a NIOSH approved respirator is recommended. Do not apply directly to plants.

WHERE TO USE

Dust may be applied to areas where insects harbor or travel. To be used in and around residential and commercial/industrial structures such as apartments, condominiums, homes, hotels, motels, resorts, hospitals, multi-family housing, schools, nursing homes, offices, restaurants, kitchens, laboratories, factories, modes of transport (not to include airplane cockpits), garages, storage units and other areas of

human habitation or activity. Provides up to 30 days control.

FOR INDOOR USE: Apply to wall voids, cracks and crevices where insects harbor, including, but not limited to: behind backsplashes, baseboards and under carpet tack strips. Prior to use, test a small inconspicuous area for possible staining.

COCKROACHES: Apply to wall voids cracks and crevices where cockroaches may be harboring. Dust will kill those cockroaches that are directly contacted and those that enter the area after application.

ANTS: Apply directly to ant trails or to nesting sites. Carpenter ants may nest in areas associated with excess moisture or leaks within the structure. Inspect and locate such areas where nests and ant activity is suspected. It may become necessary to drill holes in order to treat into hidden void areas where ants may harbor, nest or travel.

FOOD AREAS AND FOOD HANDLING: Apply product directly into voids in food preparation areas such as walls, floorboards, under and around appliances, waste disposal areas and any other area where insects may be hiding or harboring. For use on non-food contact surfaces. If incidental contact occurs, clean up thoroughly.

FOR OUTDOOR USE: For control of crawling pests that enter structures from outdoor areas, apply along edges of patios, cracks or expansion joints in or along foundations or pavement, driveways, porches, doorways (to include French and sliding glass doors), window sills and weep holes. Dust may also be applied in those areas where pests harbor around the structure to include under doormats, under and around potted plants, patio furniture, columns, eaves and soffits. For best results, apply directly to insects. Re-apply as needed or if dust becomes wet.

STINGING INSECTS: Stinging insects may be killed using this product. Care should be taken when attempting to kill these insects. The applicator may wish to consider the use of an aerosol contact kill product such as ProVerde™ Wasp & Hornet Killer. For optimal results, application should be made during dawn or dusk when insect activity is low and colony members are present within the nest. Using a hand or powered duster, apply dust directly into the nest entrance or to the void area where stinging insects have colonized. Care should be taken to inspect and locate all nest entry areas. It may be necessary to create application access by drilling holes where suitable. Follow up to check for complete control of nest after 24 to 48 hours. Note that nests may be located either indoors or outdoors.

PROVERDE™ DUST INSECTICIDE PEST CONTROL OPERATOR MARKET

DIRECTIONS FOR USE

Read entire label prior to use and use product as directed. Product may be applied directly or with a manual or power duster. The amount of product to be applied will vary with the site but should usually be in the range of 12-45 oz. per 100 ft². For heavy infestations or for use on spiders or larger insects such as American cockroaches, the 45 oz. rate is recommended. Store sealed product in a dry area between uses.

STORAGE AND DISPOSAL

Any unused product must be disposed of on site or at an approved waste disposal facility.

STORAGE: Store in a cool, dry area away from heat, sparks or open flame.

DISPOSAL: Do not reuse or refill this container. When container is empty, recycle if available or dispose of in trash.
