

## INTRODUCING

# EQUUS<sup>®</sup>

## 720 SST Fungicide

Superior disease control for potatoes now available from AMVAC

Potato growers fighting black dot, Botrytis vine rot, early blight and late blight have a powerful tool from AMVAC in EQUUS<sup>®</sup> 720 SST Fungicide. A cornerstone of disease management programs in potatoes, EQUUS provides excellent activity on these diseases and can be applied alone or in a tank mix with other registered fungicides.

With excellent crop safety and multi-site modes of action, potato growers will achieve the best results when using EQUUS as part of a disease program based on pest pressure and plant size.

### EQUUS QUICK FACTS:

Active Ingredient: Chlorothalonil

Fungicide Group: M5 with low potential for resistance development

Signal Word: Warning

Formulation: Flowable

Registered Crops: Almonds, tree fruit, peanuts, potatoes, tomatoes and more

Packaging: 6 lb./gallon

PEST	USE RATE	SEASONAL LIMITS	APPLICATION GUIDELINES
Black dot Botrytis vine rot Early blight Late blight	0.75 pts./A then 1.0 - 1.5 pts./A	15 pints per acre, per year	<p>Begin applications using ground, air or chemigation at the low rate when vines are first exposed and leaf wetness occurs. Repeat applications at 5- to 10-day intervals but do not apply at less than 5-day intervals. Begin applying the higher label rates at 5- to 10-day intervals when any one of the following events occur:</p> <ul style="list-style-type: none"> <li>• Vines close within the rows</li> <li>• Late blight forecasting measures 18 disease severity values (DSV)</li> <li>• The crop reaches 300 P-days</li> </ul> <p>Increase water spray volume as canopy density increases. Use the highest rate and shortest interval when plants are rapidly growing and disease conditions are severe. Do not exceed a 10-day application interval when using chemigation. Do not apply within 7 days of harvest.</p>
