

# Simple. Flexible. Effective.

The proven residual weed control partner for your soybean herbicide program.

## How Scepter® 70 DG Herbicide works:

Scepter 70 DG is a group 2 ALS herbicide. When Scepter 70 DG is applied to the soil, susceptible weeds emerge, growth stops, and then, the weeds either die or are not competitive with the soybean crop. The mode of weed activity involves uptake of Scepter 70 DG by weed roots and/or foliage and rapid translocation to growing points. Therefore, adequate soil moisture is important optimum Scepter 70 DG activity.

**Scepter 70DG key benefits:  
Excellent soybean safety,  
broad application window  
and residual control.**

- **Fall applications prior to planting soybeans** for control of winter annuals and early season weeds. Refer to supplemental label for fall applications in Regions 2 and 3.
- **Spring early preplant to preemergence:** for control of a broad spectrum of weeds like black nightshade, cocklebur, foxtail, jimsonweed, lambsquarter, morningglory species, mustard species and smartweed. Scepter 70 DG will also suppress barnyardgrass, velvetleaf and yellow nutsedge.
- **Early post:** suppression of volunteer corn and supplementing residual control of cocklebur, broadleaf weed and grass species.
- **Simplicity:** Scepter 70 DG is applied at the same low rate across soil types and tillage practices.

## Scepter 70 DG – Proven Weed Management in Soybeans

**Scepter 70 DG** is a proven tool for weed management in soybean production.

**Scepter 70 DG** is a simple, flexible and effective residual component for soybean herbicide programs.

**Resistance management:** Naturally occurring biotypes of some weeds may not be effectively controlled by **Scepter 70 DG** and perhaps other group 2 ALS herbicides. In such cases, **Scepter 70 DG** should be tank mixed or used sequentially with a herbicide having a different, effective mode of action. Always read and follow label directions.

### Key Tank Mix Combinations for Soil Applications

**Preplant burndown: Scepter 70 DG should be applied at 2.1 – 2.8 oz per acre**

- Scepter 70 DG + metribuzin + glyphosate (or Parazone® 3 SL Herbicide)
- Scepter 70 DG + flumioxazin + glyphosate (or Parazone)
- Scepter 70 DG + sulfentrazone + glyphosate (or Parazone)

**PRE (preemergence) Scepter 70 DG should be applied at 2.1 – 2.8 oz per acre**

- Scepter 70 DG + metribuzin + s-metolachlor (Dual Magnum® Herbicide or other group 15 herbicide)
- Scepter 70 DG + sulfentrazone + s-metolachlor (Dual Magnum or other group 15 herbicide)

**POST (postemergence) Scepter 70 DG should be applied at 1.4 – 2.8 oz per acre**

- Scepter 70 DG + glufosinate
- Scepter 70 DG + fomesafen

**SCEPTER**  
70 DG herbicide
