

NO COMPETITION

Peanut Producers Turn to THIMET® Insecticide Year After Year for Proven, Dependable and Profitable Control

Field trials from 2013 in Georgia show that THIMET® outperforms and out-yields the competition. In fact, head-to-head fields trials against CruiserMaxx® across the Southeast show that when it comes to controlling thrips, THIMET has no competition.

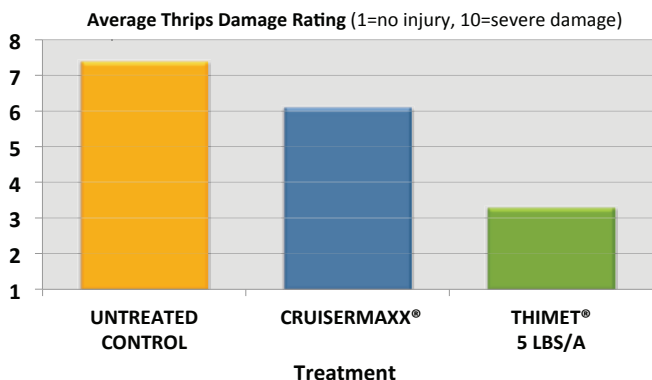

PROVEN AND DEPENDABLE PERFORMANCE

Competitive products come and go, but THIMET remains the industry standard for one simple reason: It works.

Similar results were found in field trials conducted in Virginia, North Carolina and South Carolina proving that year after year—even in stressful years when other products fall short—THIMET performs.

Performance of THIMET® 20G in Peanuts

Across Trial Summary from Public Field Trials in Georgia, 2013

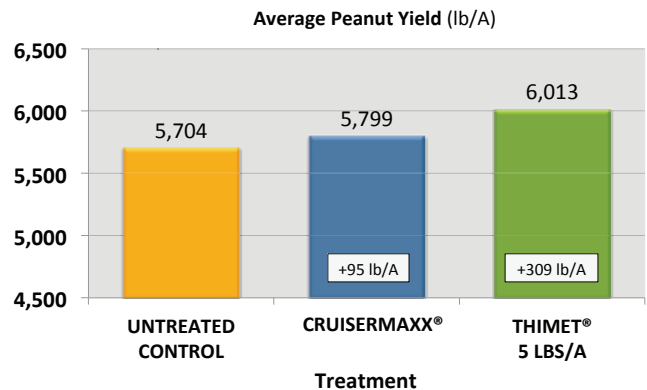

Based on all available data points (N=8) from Univ. GA cooperators. All seed treated with fungicide.

PROFITABLE

Although the difference between THIMET and competitors such as CruiserMaxx could be seen within a month of planting, the divide grew wider throughout the season.

Performance of THIMET® 20G in Peanuts

Across Trial Summary from Public Field Trials in Georgia, 2013

Based on all available data points (N=10) from Univ. GA cooperators. All seed treated with fungicide.

The difference is clear – THIMET works.

Apply THIMET with a granular pesticide applicator properly calibrated to assure accurate placement and proper dosage and see the results. For more information on THIMET and how to grow your best peanuts, contact your peanut consultant or retailer. To learn more about the entire AMVAC portfolio, call 1-888-462-6822 or visit us online at www.amvac-chemical.com.

On the left are CruiserMaxx® treated peanuts and on the right are peanuts treated with THIMET®. Both plots feature the 06G cultivar and were planted on May 1, 2013. Photo was taken at a University of Georgia plot on June 11, 2013 at the Gibbs Farm, Tifton, GA.

ADVANTAGES OF THIMET®

Peanut producers expect — and get — better thrips control, fewer rescue treatments and bigger yields using THIMET® insecticide. Here is what some of the top consultants in the Southeast had to say about THIMET.

“THIMET has always been an industry standard for thrips control in peanuts.”

Jim Griffin, Griffin Ag Scouts – Bainbridge, GA

“Until I see differently, and I did not see that this year, THIMET is the way to go.”

Doyle Singleton, Advanced Crop Care, Inc. – Pelham, GA

“When you try a new product you want it to have a good year. I think you will see those guys that tried it this time go back to THIMET next year. You are going to see more growers go back to THIMET, I truly believe that.”

Wes Briggs, Briggs Crop Services, Inc. – Bainbridge, GA

“I have found less Tomato Spotted Wilt Virus on THIMET treated peanuts. It’s clearly a marked difference between the seed treatment versus THIMET.”

Edd Harrison, Double D Advisory Services, LLC. – Pelham, GA

“If you are looking at a seed treatment you are looking at probably a few weeks of thrips control. There are so many other soil insects out there, and even though you don’t hear much about them, I feel like THIMET gives us some control over them. That’s one of the reasons I use THIMET.”

Jack Royal, Royal’s Ag Consulting Co., Inc. – Leary, GA
