

PROVEN. DEPENDABLE. PROFITABLE. THIMET® INSECTICIDE.

FOR RELIABLE CONTROL, YEAR AFTER YEAR, PEANUT GROWERS TURN TO THIMET.

Having a successful peanut crop isn't about doing what's new or easy, it's about doing what is right. That is why more peanut growers across the Southeast turn to THIMET® Insecticide.

PROVEN

THIMET has long been the industry standard for controlling thrips and leafhoppers in peanuts and a variety of other soil insects including wireworms in other crops. Absorbed through the roots and translocated throughout the plant, THIMET provides systemic protection from the roots up and has been tested extensively by land grant universities in all types of peanut growing conditions.

THIMET is still the standard for thrips control, with no known cases of resistance. This is a claim few products can make after a few years, much less after the time that THIMET has been used.

"When you try a new product you want it to have a good year, and 2013 was definitely not that," says Wes Briggs, Briggs' Crop Services, Inc. "Guys that tried something new, like CruiserMaxx®, this year are going back to THIMET next year."

Some products, when facing stressful growing conditions and heavy insect pressure stumble, but year after year THIMET has stood strong. This year, many growers who used a seed treatment

either had unmanageable thrip pressure or had to follow with foliar sprays. THIMET treated fields showed more plant vigor and fewer instances of Tomato Spotted Wilt Virus (TSWV).

DEPENDABLE

Thrips cause severe crop stunting and yield loss due to damage from direct feeding and transmission of TSWV. 2013 saw particularly bad thrips pressure. This put peanut insecticides to the test, but THIMET proved to many peanut growers that going with the easier option is not always better.

"We have always gotten good results out of THIMET," says Jim Griffin, Griffin Ag Scouts. "We see less TSWV when we use THIMET."

In fact Griffin was not alone in that sentiment. Consultant after consultant indicated that if it wasn't for the proven control of THIMET many fields would have been in serious trouble last year.

"I don't know of one CruiserMaxx situation that did not require treatment," says Scott Brown, 4NACB Crop Consulting, LLC. "I think, for my growers, those who select to use it again will be more concerned with convenience than performance."

PROFITABLE

Not only is THIMET proven and dependable, but growers who use it know that it definitely makes them more profitable. THIMET delivers proven thrips control and overall protection that can help growers produce more pounds of peanuts.

More vigorous stands. Minimal rescue treatments. Important component for TSWV management.

More importantly, THIMET has been proven to increase average yields by nearly 400 lbs per acre as compared to untreated checks in University of Georgia trials in 2011. This is why more consultants and growers depend on THIMET than any other product.

Isn't it time that you protected your peanuts and profits with THIMET?
